Juan Guillermo Barrios Villamil

PROFESSIONAL RÉSUMÉ

Data Analyst | Electronic Engineer

Location: Bogotá, Colombia | Email: juguibavi27@gmail.com | LinkedIn: linkedin.com/in/juan-guillermo-barrios-villamil-474733234 | GitHub: github.com/barriosj136-oss | Portfolio: portfolio-nu-ashy-28.vercel.app

Electronic Engineer from Universidad de los Andes who cleans, reconciles, and visualizes operational and financial data. At Iron Mountain I work hands-on with billing, invoice, payment, and collections records: I reconcile sources in Excel, investigate discrepancies, and build Google Apps Script dashboards and tools that replace manual workbooks. I contributed to loading approximately 18,000 accounts into Oracle. Portfolio projects include public-budget analysis in Python and SQL and dashboards built on fictional data. Seeking Data Analyst, BI Analyst, Business Analyst, or Operations Analyst roles.

Technical Skills

Data review and analysis: Excel pivot tables and lookups · data validation and reconciliation · Python for data cleaning and validation · SQL (SQLite), including JOINs, CTEs, and window functions

Dashboards and tools: Google Apps Script · Chart.js and SVG charts · HTML · CSS · JavaScript · React · Next.js · TypeScript · CSV

AI-assisted development: Claude Code · ChatGPT / Codex for building, testing, and reviewing tools

Currently developing: Power BI · DAX · pandas · Git and GitHub workflows · further SQL and Python practice

Professional Experience

Strategic Planning & High-Risk Account Specialist

Iron Mountain · May 4, 2026 – Present

- Contributed to the bulk load of approximately 18,000 accounts into Oracle, replacing record-by-record manual entry.
- Built a reserve dashboard in Google Apps Script that replaced a manual Excel workbook: rebuilt its pivot and per-account running-total logic, validated results against control totals, and found a bug where a total read from the wrong source tab and came out inflated.
- Built an internal multi-tab operations suite in Apps Script for bulk reference lookup, account-key normalization and deduplication, data-freshness monitoring, and settlement tracking; it reads 1M+ row exports in the browser and keeps only the relevant accounts.
- Instrumented the suite to time every task: in its first four days it logged 103 tasks and an estimated 38 hours of manual work saved. Building the settlement view dropped from about 45 minutes by hand to 1.3 minutes on average, and the backlog dashboard from about 15 minutes to under 3 seconds.
- Automated abandoned-record processing with a web tool and a dashboard that tracks account loading and recovery.
- Reconcile account, invoice, payment, inventory, and service records in Excel to find and investigate billing discrepancies.
- Prioritize and follow up High Risk account cases, and explain outstanding balances and payment requirements on inactive accounts so authorized teams can decide on service restoration.

IT Support Assistant

CivilTech Ingeniería y Construcción S.A.S. · December 1, 2025 – January 31, 2026

- Performed software quality testing and managed electronics inventory.
- Conducted preliminary exploration of business opportunities related to sensors.

Customer Service Agent

Foundever de Colombia · February 17, 2025 – July 2, 2025

- Handled customer service requests in an English-language support environment and followed service workflows.

Selected Projects

Reserve & Rolling dashboard (demo)

Public version, on fictional data, of a dashboard that replaced a manual Excel reserve workbook. Two views, General Reserve and Rolling (monthly balances aged 360+ days), rebuild the workbook's pivot and per-account running-total logic and check every result against control totals.

Tools: Google Apps Script · JavaScript · Chart.js · Excel logic

Bogotá 2025 public-budget commitments

Analyzed 7,681 official detail records covering 50 entity labels and 2,198 budget-item codes. Python cleaning and validation, plus SQL JOINs, CTEs, and window functions, reconcile monthly changes to COP 36.26 trillion in cumulative December commitments. Retained 752 records with cumulative decreases for review.

Tools: Python · SQL · SQLite · public CSV

NovaTech: invoices, payments, and monthly performance

Built a 4,800-row generated invoice-and-payment dataset (Canada/CAD and United States/USD, 2024–2025) and a monthly dashboard of invoiced, paid, recovered, and outstanding amounts. Python and SQL checks verify record IDs, payment status, and invoice = paid + outstanding. The CSV can be edited in Excel and reloaded into the dashboard.

Tools: Python · SQL · SQLite · Excel · CSV · React · TypeScript

Ops Studio: operations workspace

Seven-view browser workspace on fictional data: backlog KPI dashboard, collections action plan, bulk reference search, records listing, bulk-upload CSV generator, follow-up queue, and knowledge base. Includes CSV import and export and charts drawn in plain JavaScript and SVG.

Tools: HTML · CSS · JavaScript · SVG · CSV

Lukas: personal-finance app

Parses bank-statement PDFs into transactions: cleans date and number formats, infers income vs. expense from the running balance, and assigns duplicate-safe IDs so re-imported statements are not counted twice. Shows a spending calendar and a category chart.

Tools: JavaScript · PWA · Vercel serverless functions · PDF parsing

Education

Electronic Engineering

Universidad de los Andes · Degree awarded October 20, 2025

Thesis: IoT automation of electronic systems integrating an adjustable voltage source and an AD9833 signal generator. Work involved system integration, measurement, and technical testing.

Certifications and Courses
