Juan Guillermo Barrios Villamil

PROFESSIONAL RÉSUMÉ

Electronic Engineer | Junior Data Analyst | Financial and Operational Data

Location: Bogotá, Colombia | Email: juguibavi27@gmail.com | LinkedIn: linkedin.com/in/juan-guillermo-barrios-villamil-474733234 | GitHub: github.com/barriosj136-oss | Portfolio: portfolio-nu-ashy-28.vercel.app

Electronic Engineer from Universidad de los Andes with experience in High Risk account operations at Iron Mountain. I review account, service, invoice, and payment records; investigate billing discrepancies; and prepare reports, charts, and workflow tools for operational follow-up. I contributed to loading approximately 18,000 accounts into Oracle and automated abandoned-record processing. Seeking junior Data Analyst, BI Analyst, Business Analyst, or Operations Analyst roles.

Professional Experience

Strategic Planning & High-Risk Account Specialist

Iron Mountain · May 4, 2026 – Present

- Review and prioritize High Risk account cases, track case status, and coordinate operational follow-up.
- Use Excel to compare account, invoice, payment, inventory, and service records and investigate billing discrepancies.
- Contributed to the bulk loading of approximately 18,000 accounts into Oracle rather than entering each record individually.
- Automated abandoned-record processing through a web tool and built a dashboard to track account loading and recovery.
- In some inactive-account cases, explain outstanding invoice balances and payment requirements; authorized teams decide whether service is restored.

IT Support Assistant

CivilTech Ingeniería y Construcción S.A.S. · December 1, 2025 – January 31, 2026

- Performed software quality testing and managed electronics inventory.
- Conducted preliminary exploration of business opportunities related to sensors.

Customer Service Agent

Foundever de Colombia · February 17, 2025 – July 2, 2025

- Handled customer service requests in an English-language support environment and followed service workflows.

Selected Projects

Bogotá 2025 public-budget commitments

Analyzed 7,681 official detail records covering 50 entity labels and 2,198 budget-item codes. Python cleaning and validation, plus SQL JOINs, CTEs, and window functions, reconcile monthly changes to COP 36.26 trillion in cumulative December commitments. Retained 752 records with cumulative decreases for review.

Tools: Python · SQL · SQLite · public CSV

NovaTech monthly performance (12 months)

A 2025 monthly view of invoices, payments, recoveries, and outstanding balances from the same 4,800-row generated invoice-and-payment dataset used for the NovaTech case. The source covers 2024–2025 and separates Canada/CAD from United States/USD; Python and SQL checks validate records and reconciliations. Edit the CSV in Excel and reload the local dashboard.

Tools: Python · SQL · SQLite · Excel · CSV · React · TypeScript

NovaTech invoices and payments: 4,800 generated rows

Built the editable source dataset behind the monthly dashboard: 4,800 generated invoice and payment records for Canada/CAD and the United States/USD. Python and SQL checks verify record IDs, payment status, and invoice = paid + outstanding; recovered amounts are a subset of paid.

Tools: CSV · Excel · Python · SQL · SQLite

Operations Data Review Suite

Built a browser-based tool with six workflows for filtering sample records, reference matching, CSV import/export, record updates, follow-up notes, and knowledge articles. The demo uses generated data and browser storage only.

Tools: HTML · CSS · JavaScript · CSV

Operations Decision Copilot

Built a browser-based rule-driven prototype that structures a fictional operations case into confirmed facts, open questions, and verification steps for human review. It prepares a review note; it does not use AI or make account decisions.

Tools: Next.js · React · TypeScript

Education

Electronic Engineering

Universidad de los Andes · Degree awarded October 20, 2025

Thesis: IoT automation of electronic systems integrating an adjustable voltage source and an AD9833 signal generator. Work involved system integration, measurement, and technical testing.

Technical Skills

Data review and analysis: Excel for operational record review · Python for project data cleaning and validation · SQL (SQLite), including JOINs, CTEs, and window functions in project work

Web and data tools: HTML · CSS · JavaScript · React · Next.js · TypeScript · CSV

Currently developing: pandas · Power BI · DAX · Git · GitHub workflows · further SQL and Python practice
